

Facilities Master Plan - City of Penticton

GDH Solutions led a comprehensive review of the City's municipal facilities and the development of a Master Plan. With assessments, recommendations, and costs for upgrading or replacing facilities the City of Penticton will be armed with a plan for the future, ensuring that the City is able to provide the best community, recreation, arts, policing, and infrastructure facilities to the community.

The key deliverable, the Facilities Master Plan, includes recommendations based on the detailed analysis of each facility and the associated costs for upgrades or replacement. The Implementation Plan outlines short, medium and long term facility recommendations complete with future project cost estimates.

The project team consisted of a dedicated team of consultants - including municipal facility specialists, architects, engineers (structural, mechanical, electrical, refrigeration), and costing professionals - that are highly experienced in assessing, planning, and creating beautiful public facilities.
