

Boat Launch Study - Kalamalka Lake & Okanagan Lake

Regional District of North Okanagan

The primary outcome of the study was the creation of a comprehensive twenty-year Plan and Implementation Strategy for the provision of non-motorized boat launch facilities on Kalamalka Lake and motorized and non-motorized on Okanagan Lake which address current and future demand. The existing boat launch inventory was assessed, and future demand for boating facilities was determined through a household survey and community consultation. In addition, the study identified and provided an evaluation of the different methods of delivering this service (local government, private, or private/public partnership).
